

Regular full backups strategy

Regular backups	<p>✓ Pros</p> <ul style="list-style-type: none">• Easy to implement• Does not increase computational load	<p>✗ Cons</p> <ul style="list-style-type: none">• Requires an important storage space (usually several Gb)• Information is only recovered in post-treatment
	<p>Live tracking</p> <ul style="list-style-type: none">• Strongly reduces storage space requirements• Provides live access to information	<ul style="list-style-type: none">• Increases computational load (tree's pruning and shortening)• Increases live memory load (tree's nodes must be stored in memory)

Live tracking strategy
